

Static Paint[®] *Anti-Dust*

Dissipates static charge which attracts dust.

Repels dust from ceilings, walls and floors.

Our **Static Paint** coating is an electrically-conductive coating that is designed to reduce or prohibit a static-electrical charge and its effects.

Reducing static electricity to a surface will result in dust not being able to cling to the surface, greatly reducing dust build-up.

DUST CONTROL

Our **Static Paint** has a conductive range of $10^7 - 10^9$. Suitable for dust control.
